HIGH CECILIA

HIGH CECILIA

The sleek and beautifully designed Cecilia is made from the best components we have developed from over 40 years of experience in loudspeaker construction.

The hyperspherical horn, combined with the ion tweeter and precisely coupled rich bass, makes the Cecilia an exceptional loudspeaker in its class.

It impresses with a sound image of great spaciousness, rhythm and natural timbres.

The large 620 mm hyperspherical horn transmits a full four octaves without tonal coloration and with maximum dynamics. Our ion tweeter shines in the high frequencies. The world-renowned tweeter uses an oscillating plasma column to make the air vibrate with maximum clarity and openness. The bass cabinet with two 10-inch woofers is supported by a subwoofer and underscores the authentic and open sound image with a rich bass foundation.

The art of combining large and complex loudspeaker components into a total work of art is our specialty. With the High Cecilia, Acapella demonstrates its world-leading expertise in combining the finest technological and musical components.

TECHNICAL DATA

frequencies:

transmission range	25 Hz - 40 kHz
--------------------	----------------

construction:

bass	3 x 10" driver
------	----------------

middle frequency	1 x 1" driver hyperspherical wideband horn 620mm
------------------	---

high frequency	plasma tweeter
----------------	----------------

efficiency	93 dB/1W/1m
------------	-------------

impedance	8 Ohm
-----------	-------

dimensions (hxwx) without horn	1560 x 350 x 560 mm
--------------------------------	---------------------

dimensions (hxwx) with horn	1780 x 620 x 700 mm
-----------------------------	---------------------

weight	140 kg
--------	--------

capacity	100 W - 1000 W / 10 ms Impuls
----------	-------------------------------

price	on request
